

SKILL EXAMPLE

Markdown to PDF — Sample

A demonstration of every supported construct

[Example document](#)

Markdown to PDF — Sample

This document exercises every construct the converter supports. The `# H1` above is used as the cover title and is not repeated in the body.

Headings and prose

Paragraphs support **bold**, *italic*, `inline code`, and [links](#). Long paragraphs wrap and flow naturally across the page with sensible margins.

A third-level heading

A FOURTH-LEVEL HEADING

Lists

Unordered:

- › First point with **emphasis**
- › Second point with `code`
- › Third point

Ordered:

1. Step one
2. Step two
3. Step three

Tables

AREA	OWNER	STATUS
Front-end	Owner A	On track
Back-end logic	Owner B	On track
API handlers	Owner C	At risk

Callouts

The key takeaway.

Blockquotes render as branded callouts. A bold lead-in becomes the callout heading, and the rest becomes the body.

Code

```
def hello(name):  
    return f"Hello, {name}"
```

Content after a horizontal rule continues here.
