

MODULE 2

A redesigned delivery cadence and PR-review approach

The AI-First Delivery Lifecycle

Workshop deliverable · template

The problem to fix

Unchanged ceremonies become the bottleneck once devs are 3–5x faster: stories finish faster than they can be specced, PR queues grow, and coordination roles strain. This redesigns cadence and review for the new velocity.

Cadence — before / after

ELEMENT	BEFORE (STRAINING)	AFTER (REDESIGNED)
Batch size	2-week sprint of stories	Continuous flow / short cycles
Planning	Big up-front sprint planning	Rolling, spec-led intake
Standup	Status round-robin	Blocker + decision focus
Velocity metric	Story points	Cycle time + throughput
Coordination	Manual ticket writing	Spec-first; AI drafts, human owns intent

PR review for AI-generated code

STEP	APPROACH
First pass	AI-assisted review flags obvious issues before a human looks.
Human bar	Reviewer focuses on intent, edge cases, and integration — not boilerplate.
AI-code marker	PRs indicate AI-generated portions so review attention is calibrated.
Merge gate	Tests + coverage gate must pass regardless of who/what wrote the code.

Watch for

Review becoming the new bottleneck. If PRs sit, the constraint has just moved — address it deliberately, don't let it re-form.
