

MODULE 3

A governance checklist: approved tools, region, DLP, provenance, audit

What a regulator would ask to see

“How do you govern AI in your development process?” — this checklist is the answer, made concrete. Controls that don't slow the team down.

Controls checklist

CONTROL	IN PLACE?	EVIDENCE / OWNER
Approved tool list maintained	☐	___
Enterprise agreements (no training on your data)	☐	___
Correct region for AI workloads	☐	___
DLP prevents sensitive data reaching AI endpoints	☐	___
AI-generated code provenance tracked	☐	___
Audit trail on AI usage	☐	___
Supply-chain posture for model providers/APIs	☐	___
Periodic compliance review includes AI	☐	___

Governance enables speed

Frame each control as what it *unlocks* (safe scaling), not what it blocks. The aim is frictionless guardrails, not a gate.
