

MODULE 3

An AI usage policy (drafted in the room)

Shipping Safely

Workshop deliverable · template

Purpose

A real, drafted-in-the-room policy for how the organisation uses AI tools in development — not a promise to write one later. Governance here is an enabler: it's what lets leadership say “yes” to scaling.

Policy clauses

CLAUSE	POSITION (DRAFT IN THE ROOM)
Approved tools	Only these AI tools/endpoints are permitted: ____
Data handling	Never paste secrets/PII/production data. Permitted data classes: ____
Enterprise agreements	Tools must run under agreements excluding data from training.
Region	AI workloads run in region: ____ (e.g. EU).
Code provenance	AI-generated code is identifiable in version control.
Review	AI-generated code meets the same review + test bar as human code.
Exceptions	How to request an exception, and who approves: ____

Make it real

Publish it where engineers already are (repo / handbook), name an owner, and set a review date. A policy no one can find is not a control.

Sign-off

- › Policy owner: ____
- › Approved by (security / compliance): ____
- › Review cadence: ____
