

MODULE 3

EU AI Act classification (where applicable)

Workshop deliverable · template

Applicability triage

First decide whether the EU AI Act is even in scope for the client's AI use. It typically bites where AI is used in higher-risk domains.

- In scope if AI touches: credit / lending, hiring / HR, pricing, biometric or safety-critical use cases, or serves EU users in regulated ways.
- Often lighter-touch if AI is purely an internal developer productivity tool.
- When unsure, treat as in scope and document the reasoning.

Risk classification (record per AI use case)

USE CASE	RISK TIER	OBLIGATIONS	OWNER
—	Unacceptable / High / Limited / Minimal	—	—
—	Unacceptable / High / Limited / Minimal	—	—

Not legal advice

This is a structured first-pass classification to scope the work and surface risk — confirm obligations with qualified legal/compliance counsel.
