

MODULE 4

A Four Fears diagnostic of their org (who, what fear, what reframe)

People & Change

Workshop deliverable · template

The premise

Resistance to AI adoption is personality-driven, not stupidity. Diagnose which fear sits where, then apply the reframe that turns the fear into a reason to lean in.

The Four Fears

FEAR (TYPE)	SOUNDS LIKE	THE REFRAME
Loss of Control (Controller)	"I can't manage what I can't understand."	AI gives <i>more</i> oversight and observability, not less.
Project Failure (Driver)	"This could go wrong and I'm accountable."	AI compresses risk — faster, cheaper failure via tighter feedback.
Disruption to Hierarchy (Stabiliser)	"My position is under threat."	Those who orchestrate AI become <i>more</i> valuable.
Feeling Overshadowed (Influencer)	"If AI does the impressive work, what's my value?"	AI handles grunt work; they get more stage, not less.

Org diagnostic (fill in)

Champions matter too

Record your champions as well as your blockers — the difference between them is usually the intervention that works.
